Lab Assignment 02

Inspiring Excellence

Course Code:	**CSE111**
Course Title:	**Programming Language II**
Topic:	**OOP Basics, Instance Variable and Instance Method**
Number of Tasks:	**11 (Coding: 08, Tracing: 03)**

[Submit all the Coding Tasks (Task 1 to 8) in the Google Form shared on buX before the next lab. Submit the Tracing Tasks (Task 9 to 11) handwritten to your Lab Instructors at the beginning of the lab]

[You are not allowed to change the driver codes of any of the tasks]

Task 1

You are given the following "**University**" class:

```
public class University{
    public String name;
    public String country;
}
```

Now write a Java **tester** class named "**UniversityTester**".

a. Write the main method and create 2 objects of **University** class and print the location of the objects and print the instance variables of the objects. Are the location of the objects the same?

b. Now change the instance variables of the first object.
name = "Imperial College London"
country = "England"

Now change the instance variables of the second object.
name = "BRAC University"
country = "Bangladesh"

Now check if the instance variables of both objects have changed or not and whether the instance variables of both objects are of the same value or not.

Task 2

Design the **"Student"** class so that the main method prints the following:

Tester Class	Output

`public class StudentTester1{`
`  public static void main(String [] args){`
`  Student s1 = new Student();`
`  System.out.println("Name of the Student: "+s1.name);`
`  System.out.println("ID of the Student: "+s1.id);`
`  s1.name = "Bob";`
`  s1.id = 123;`
`  System.out.println("Name of the Student: "+s1.name);`
`  System.out.println("ID of the Student: "+s1.id);`
`  }`
`}`
	`Name of the Student: Default`
	`ID of the Student: 0`
	`Name of the Student: Bob`
	`ID of the Student: 123`

Task 3

Design the **CSECourse** class to generate the correct output from the driver code provided below:

Driver Code	Output

public class CourseTester{
  public static void main(String args []){
  CSECourse c1 = new CSECourse();
  System.out.println("Course Name: "+c1.courseName);
  System.out.println("Course Code: "+c1.courseCode);
  System.out.println("Credit: "+c1.credit);
  }
}
	Course Name: Programming Language II
	Course Code: CSE111
	Credit: 3

Task 4

Tester Class	Output

public class Tester6{
  public static void main(String [] args){
  ImaginaryNumber num1 = new ImaginaryNumber();
  String p = num1.printNumber();
  System.out.println(p);
  System.out.println("1********");
  num1.realPart=3;
  num1.imaginaryPart=7;
  System.out.println(num1.printNumber());
  System.out.println("2********");
  ImaginaryNumber num2 = new ImaginaryNumber();
  num2.realPart=1;
  num2.imaginaryPart=9;
  System.out.println(num2.printNumber());
  }
}
	0 + 0i
	1********

	2********
	1 + 9i

Driver Code	Output

`public class Tester5{`
`  public static void main(String[] args) {`
`  Course c1 = new Course();`
`  Course c2 = new Course();`

Task 8

Create an **Employee** class to provide the expected output.

- An employee will have a name, salary and designation.

- The name will be assigned inside the newEmployee() method
- Whenever a New Employee joins his/her salary will be **Tk. 30,000** and the designation will be **junior**.
- Employees with salaries greater than **Tk. 50,000** and **Tk. 30,000** need to pay **30%** and **10%** of salary as tax respectively.
- Employees can be promoted to **senior**, **lead** and **manager** positions. Based on their promotion they will get an increment of **Tk. 25,000**, **Tk. 50,000** and **Tk. 75,000** respectively.
